## In the Claims

- 1. (Original) A vacuum cleaner brushroll, comprising:
  - a brushroll body; and
  - at least one row of bristle tufts disposed on the brushroll body, with the at least one row of bristle tufts comprising a first tuft of a first effective length from the brushroll body and at least a second tuft of a second effective length that is different from the first effective length.
- 2. (Original) The vacuum cleaner brushroll of claim 1, wherein the first tuft is of a first diameter and the second tuft is of a second diameter that is different from the first diameter.
- 3. (Original) The vacuum cleaner brushroll of claim 1, wherein the first tuft is of a first stiffness and the second tuft is of a second stiffness that is different from the first stiffness.
- 4. (Original) The vacuum cleaner brushroll of claim 1, wherein the first tuft is of a first material and the second tuft is of a second material that is different from the first material.
- 5. (Original) The vacuum cleaner brushroll of claim 1, wherein the first tuft is of a first color and the second tuft is of a second color that is different from the first color.
- 6. (Original) The vacuum cleaner brushroll of claim 1, wherein the first tuft is of a first number of bristles and the second tuft is of a second number of bristles that is different from the first number of bristles.
- 7. (Original) The vacuum cleaner brushroll of claim 1, wherein the at least one row of bristle tufts is substantially radially-outwardly oriented from the brushroll body.

- 8. (Original) The vacuum cleaner brushroll of claim 1, wherein the at least one row of bristle tufts is angled with respect to a radius direction of the brushroll body.
- 9. (Withdrawn) A vacuum cleaner brushroll, comprising:
  - a brushroll body; and
  - at least one row of substantially radially-outwardly oriented bristle tufts disposed on the brushroll body, with a particular tuft of the at least one row comprising first bristles of a first effective length from the brushroll body and at least second bristles of a second effective length that is different from the first effective length.
- 10. (Withdrawn) The vacuum cleaner brushroll of claim 9, wherein the first bristles are of a first diameter and the second bristles are of a second diameter that is different from the first diameter.
- 11. (Withdrawn) The vacuum cleaner brushroll of claim 9, wherein the first bristles are of a first stiffness and the second bristles are of a second stiffness that is different from the first stiffness.
- 12. (Withdrawn) The vacuum cleaner brushroll of claim 9, wherein the first bristles are of a first material and the second bristles are of a second material that is different from the first material.
- 13. (Withdrawn) The vacuum cleaner brushroll of claim 9, wherein the first bristles are of a first color and the second bristles are of a second color that is different from the first color.
- 14. (Withdrawn) The vacuum cleaner brushroll of claim 9, wherein the first bristles are formed of a first number of bristles and the second bristles are formed\_of a second number of bristles that is different from the first number of bristles.

15. (Original) A method of forming a vacuum cleaner brushroll, said method comprising:

providing a brushroll body; and

- providing at least one row of bristle tufts disposed on the brushroll body, with the at least one row of bristle tufts comprising a first tuft of a first effective length from the brushroll body and at least a second tuft of a second effective length that is different from the first effective length.
- 16. (Original) The method of claim 15, wherein the first tuft is of a first diameter and the second tuft is of a second diameter that is different from the first diameter.
- 17. (Original) The method of claim 15, wherein the first tuft is of a first stiffness and the second tuft is of a second stiffness that is different from the first stiffness.
- 18. (Original) The method of claim 15, wherein the first tuft is of a first material and the second tuft is of a second material that is different from the first material.
- 19. (Original) The method of claim 15, wherein the first tuft is of a first color and the second tuft is of a second color that is different from the first color.
- 20. (Original) The method of claim 15, wherein the first tuft is of a first number of bristles and the second tuft is of a second number of bristles that is different from the first number of bristles.
- 21. (Original) The method of claim 15, wherein the at least one row of bristle tufts is substantially radially-outwardly oriented from the brushroll body.
- 22. (Original) The method of claim 15, wherein the at least one row of bristle tufts is angled with respect to a radius direction of the brushroll body.

23. (Withdrawn) A method of forming a vacuum cleaner brushroll, said method comprising:

providing a brushroll body; and
providing at least one row of substantially radially-outwardly oriented bristle tufts
disposed on the brushroll body, with a particular tuft of the at least one row
comprising first bristles of a first effective length from the brushroll body and
at least second bristles of a second effective length that is different from the

first effective length.

- 24. (Withdrawn) The method of claim 23, wherein the first bristles are of a first diameter and the second bristles are of a second diameter that is different from the first diameter.
- 25. (Withdrawn) The method of claim 23, wherein the first bristles are of a first stiffness and the second bristles are of a second stiffness that is different from the first stiffness.
- 26. (Withdrawn) The method of claim 23, wherein the first bristles are of a first material and the second bristles are of a second material that is different from the first material.
- 27. (Withdrawn) The method of claim 23, wherein the first bristles are of a first color and the second bristles are of a second color that is different from the first color.
- 28. (Withdrawn) The method of claim 23, wherein the first tuft is of a first number of bristles and the second tuft is of a second number of bristles that is different from the first number of bristles.
